

# Experiment 01 - Exercise 01: Age and Data Type

Tofik Ali

February 14, 2026

## Objective

Create a variable to store age and print its type using `type()`.

## Input

An integer age.

## Output

The age value and its type.

## Approach

Read age as an integer using `int(input(...))`, then print `type(age)`.

## Time Complexity

$O(1)$ .
