

# Experiment 02 - Exercise 07: Next Date in Calendar

Tofik Ali

February 14, 2026

## Objective

Take a date as input and display the next date in the calendar.

## Input

day, month, year.

## Output

The next valid date (day, month, year).

## Approach

- Validate the input date using month length (and leap year rule for February).
- Increase day by 1.
- If day exceeds days in that month, set day=1 and increase month.
- If month exceeds 12, set month=1 and increase year.

## Time Complexity

$\Theta(1)$ .
