

Experiment 01 - Exercise 06: Simple Interest

Tofik Ali

February 14, 2026

Objective

Compute simple interest using:

$$SI = \frac{P \times R \times T}{100}$$

Input

Principal P , rate R (in %), and time T (in years).

Output

Simple interest value.

Approach

Read P, R, T and apply the formula.

Time Complexity

$\Theta(1)$.
