

Experiment 01 - Exercise 12: Left Shift and Right Shift

Tofik Ali

February 20, 2026

Objective

Compute left shift and right shift values of a given integer using $\ll$ and $\gg$.

Input

An integer n and a non-negative shift amount k .

Output

Values of $n \ll k$ and $n \gg k$.

Approach

Read n and k , then compute shifts directly using operators.

Time Complexity

$O(1)$.
